License Management Implementation Project

The Client: A leading Sales Force Automation Solutions Company

The Problem:

- Managing licenses for all customers and distributors manually was a less organized and time consuming task
- Tracking the versions of licenses and validity of licenses
- Following up on the registration process

The Need: There was a need for an organized License distributed system

The Solution:

- Organized the existing license management process
- Built a rich web application that will manage the licenses of individual customers and distributors
- This provided the client with a centralized system for
  - Accurate, complete and consolidated license information
  - Tracking version of the licenses and validity
  - Finding specific client/distributor details or license details
  - Periodic reporting features
- Automated email reply on successful registration of the devices
- Generation of product keys to register

The Benefits:

- No interaction required for version management of licenses
- Generation of product keys eliminates the chances of license key collision
- Detailed report on the licenses sold
- Automated registration process
- Tracking version of the licenses is easier
